## Professional experience

<i>Senior software developer</i> and systems administrator at LabSEC	Jan/2018– Today
► In partnership with the Brazilian National Institute of Information Technology (ITI). Major development effort towards the official digital signature validation tool for the Brazilian Public-Key Infrastructure, that resulted in (i) a responsive new web interface; (ii) a clean API that enables headless/batch signature validation; (iii) enforced automated unit testing and continuous deployment practices.	
<i>Security ceremony agent</i> at LabSEC	Oct/2018– Apr/2019
► In partnership with public prosecutor's offices. Secure servers were provisioned to run online elections through the end-to-end verifiable voting system Helios, with reduced need for human-computer interaction.	
<i>Researcher</i> of quantum-safe blockchain protocols at LabSEC	Sep/2018– Mar/2019
► In partnership with a novel blockchain platform. Co-developed a protocol to quantum-proof a blockchain, with secure substitution of wallets, replacement of cryptographic algorithms and zero downtime for the platform.	
<i>Computer forensic examiner</i> at LabSEC	Sep/2017– Apr/2018
► In partnership with an intelligent transportation systems company. A complex data set was processed with native GNU/Linux tools and statistical techniques in order to verify the accuracy of pictures taken by speed enforcement cameras.	
<i>Junior software developer</i> at LabSEC	Nov/2016– Dec/2017
► In partnership with a Brazilian digital security company. Developed a proof-of-concept signature validation module for PDF.js and a small library able to easily customize and instantiate most artifacts in a public-key infrastructure.	
<i>Junior software developer</i> at LabSEC	May/2016– Oct/2016
► In partnership with the Brazilian National Institute of Information Technology (ITI). Implemented verification modules for CMS and PDF signatures in the official digital signature validation tool for the Brazilian Public-Key Infrastructure.
